Amitabh Sinha
Resident Editor, Pune
The Indian Express

Weather forecasting is more than just predicting monsoon rainfall. Frequent extreme weather events induced by climate change underline the importance of timely and accurate forecasts for a range of weather phenomena.

The availability of relevant weather-related information is critical for India to cope with adverse and extreme weather events, and to plan its long-term development pathways.

Do we have the human and technological resources to meet the challenge?

Are we investing enough in dealing with climate change?

How could weather forecasting change in the short and long terms?
